

TRIDENT

Three times excellent against nematodes

Oil radish

Profile

TRIDENT is an excellent oil radish variety with three nematode resistances: *Heterodera schachtii* (category 2), *Meloidogyne chitwoodi* and *Meloidogyne hapla*. Therefore, TRIDENT is a good choice for nematode control in intensive crop rotations with sugar beets, potatoes and vegetables. Additionally, the variety is resistant to clubroot. The variety shows a fast development at the beginning, which leads to good weed suppression. Deep rooting and lower tendency for flowering are other good arguments for TRIDENT

- ✓ Resistances: *Heterodera schachtii* (cat. 2); *Meloidogyne chitwoodi* and *hapla*, clubroot
- ✓ Nematode control in intensive crop rotations with sugar beets, potatoes and vegetables
- ✓ Fast early growth for good weed suppression combined with a low tendency to flowering
