

# TERRALIFE® - WARMSEASON

It's time for growth

## Profile

TerraLife® WarmSeason is ideal for early sowings in warm temperate climate zones like in Central Europe. For example after an early harvest of cereals or whole crop silage, TerraLife® WarmSeason makes a cover crop mixture, that grows under dry and warm conditions. The chosen components have a long vegetative period, reducing the risk of volunteer seeds. The early sowing additionally triggers a strong root establishment and a maximum of photo-synthesis activity. This positively effects the excretion of exudates and maximises photosynthesis.

- ✓ Suitable for early sowing
- ✓ Also for dry conditions
- ✓ Maximum photosynthesis

N-Potential approx. 60 kg/ha

## Components

19.9%	Legumes
9.5%	Cruciferous
	Linseed, Niger, Sorghum, Common vetch, Egyptian clover, Abyssinian cabbage, Field pea

## Sowing pattern

blank seed, mulch sowing, direct sowing, spreader device on tillage implement, drone

## Crop rotations

Legumes \*, Sugar beet \*, Cereals, Maize

\* Observe crop rotation diseases.

## Cultivation notes

Sowing rate	25 - 30 kg/ha
Sowing time	from end of June to beginning of August
Usage	Cover crop, summer intercrop, green fertilization, early sowing, N-Potential: approx. 60 kg/ha, medium to low proportion of legumes
