

TERRALIFE® - N-FIXX 50

Rapid soil coverage and nitrogen fixation

Profile

N-Fixx 50 is an excellent cover crop mixture for maize for winter cereal crop rotations. The mixture is very unlikely to shoot and thus suitable for early sowing dates. Its frost-sensitive components guarantee easy incorporation after winter. Deep-rooting species leave a solid soil structure and a lot of organic matter.

The mixture's legume share is below 50 %.

- ✓ Freezes off very well
- ✓ Very good nitrogen accumulation
- ✓ Rich bee forage

N-Potential approx. 80 kg/ha

Components

41.2%	Legumes
0%	Cruciferous
Phacelia, Linseed, Sunflower, Niger, Sorghum, Field pea, Common vetch, Egyptian clover, Persian clover	

Sowing pattern

blank seed, mulch sowing, direct sowing, spreader device on tillage implement, drone

Crop rotations

Oilseed rape, Sugar beet, Cereals, Maize

Cultivation notes

Sowing rate	40 - 45 kg/ha
Sowing time	from end of July to 25. August
Usage	Cover crop, winter intercrop, summer intercrop, green fertilization, normal sowing time, N-Potential: approx. 80 kg/ha, leguminous

Notes

* Also suitable as summer cover crop (e. g. between two cereal periods) when a vegetation time of at least 6 to 7 weeks is guaranteed.
