

# SAURI

Earlier than others

Sorghum

## Profile

Sorghum bicolor

SAURI is an ultra-early sorghum hybrid that is suitable for feed and biogas production due to its starch content. Due to its earliness, the variety is able to make optimal use of the growing season. It reaches a growth height of approx. 200 cm. In contrast to other sorghum varieties, its good cold tolerance and rapid youth development also make it interesting for cultivation at higher altitudes.

- ✓ Rapid youth development
- ✓ Very good cold tolerance
- ✓ High starch content

## Usage

Silo	✓
Corn	
Dualtype	

## Sowing

Sowing rate	20 - 25 Plants/m²
Seed distance	25 - 50 cm

## Sowing date

Mid may to mid June, min. 12°C soil temperature.

## Seedbed

The seedbed should be as fine-crumbled as possible (similar to beet) and a good connection to the capillary water must be ensured.

## Seeding procedure

Single grain or drill seeding technique is possible. The beet technique can also be used. Particularly with drill seeding, care must be taken to ensure sufficient reconsolidation.

## Sowing depth

2-4 cm
