

PASCAL

The Sunnyboy!

Lolium perenne

Profile

PASCAL is characterized by outstanding performance in hot&dry conditions. In official and independent tests (CTPS, Valencia) PASCAL scored up to 2 numbers better compared to the official control varieties of French Test System (CTPS). PASCAL ended as the best variety in the Valencia trial in almost all tested characteristics. Particularly in persistency under dry and warm conditions PASCAL whipped the floor with the competition. Thus PASCAL belongs to one of Europe's best varieties for sports and lawn use under these conditions. Also in the German official Turf test of BSA this variety could achieve very good values (RSM 8/8/5). As a result, the variety is also ideal for extensive grass mixtures with reduced maintenance.

PASCAL is perfect for all hot&dry conditions!

- ✓ Highest recommendation for hot&dry conditions
- ✓ Enormous density
- ✓ Good recovery
- ✓ High disease resistance
- ✓ Ideal also for extensive lawns

STRI S1 - Sport uses

Mean	5.8
Recovery	5.6
Visual merit	5.7
Shoot density	6
Fineness of leaf	5.4
Disease resistance	6.5
Winter greenness	6.3
Summer greenness	6.3
